Data Collected: 06/27/2008 - 06/29/2008

Release Date: 06/30/2008

Democrat Boswell Breaks from Gate Even in Once 'Safe' KY2 GOP House District: In an election for US House of Representatives in Kentucky's 2nd Congressional District today, 06/30/08, to fill the seat of retiring incumbent Republican Ron Lewis, Democrat David Boswell and Republican Brett Guthrie begin July effectively even, according to this exclusive WHAS-TV new poll conducted by SurveyUSA. Today, it's Boswell 47%, Guthrie 44%, within the survey's 4.3 percentage point margin of sampling error. Both candidates are state Senators. Among women, Boswell leads by 6 points; among men, the two candidates tie. Conservatives back Guthrie 3:1; moderates back Boswell 2:1. Incumbent Lewis, first elected to the House in 1994, is not seeking an eighth term. Kentucky's 2nd Congressional District, rated "Solid R" by the [Cook Political Report](#), has a [Cook Partisan Voting Index](#) of R+13. Lewis won with 55% of the vote in 2006 and with 68% of the vote in 2004. Before Lewis, Democrat William Natcher held the seat for 40 years.

Filtering: SurveyUSA interviewed 900 adults from Kentucky's 2nd Congressional District 06/27/08 through 06/29/08; of the adults, 753 identified themselves as being registered to vote. Of the registered voters, 545 were determined by SurveyUSA to be likely to vote in the November general election.

1 If the election for U.S. House of Representatives, were today, would you vote for ... (names rotated) Republican Brett Guthrie? Or, Democrat David Boswell?

Statement of Methodology: The following statement conforms to the principles of disclosure of the National Council on Public Polls: How this poll was conducted: This SurveyUSA poll was conducted by telephone in the voice of a professional announcer. Respondent households were selected at random, using Random Digit Dialed (RDD) sample provided by Survey Sampling, of Fairfield CT. All respondents heard the questions asked identically. Within the report, you will find: the geography that was surveyed; the date(s) interviews were conducted and the news organization(s) that paid for the research. The number of respondents who answered each question and the margin of sampling error for each question are provided. Where necessary, responses were weighted according to age, gender, ethnic origin, geographical area and number of adults and number of voice telephone lines in the household, so that the sample would reflect the actual demographic proportions in the population, using most recent U.S. Census estimates. In theory, with the stated sample size, one can say with 95% certainty that the results would not vary by more than the stated margin of sampling error, in one direction or the other, had the entire universe of respondents been interviewed with complete accuracy. There are other possible sources of error in all surveys that may be more serious than theoretical calculations of sampling error. These include refusals to be interviewed, question wording and question order, weighting by demographic control data and the manner in which respondents are filtered (such as, determining who is a likely voter). It is difficult to quantify the errors that may result from these factors. Fieldwork for this survey was done by SurveyUSA of Verona, NJ.
